

Commerce Automation Layer

How AI takes a creator's asset to a published listing in one click.

The Flow

- 1. Creator selects an asset and clicks "Auto-generate with AI"
- 2. AI analyzes the asset — market fit, pricing, risk, readiness
- 3. Commerce profile is built and saved
- 4. AI generates a full listing — title, description, tags, keywords, price
- 5. Creator reviews, edits if needed, and publishes
- 6. Post-launch agent monitors and optimizes every 7 days

AI Agents (Gemini 3.1 Pro Preview)

Agent	What It Does
Commerce Intake	Analyzes asset — categories, tags, pricing, risk, readiness
Listing Construction	Generates title, description, tags, keywords, price
Packaging	Suggests bundles, collections, template packs
Merchandising	Feature recommendations, cross-sell, preview tips
Search Optimization	Optimizes tags, keywords, title for discoverability
Catalog Strategy	Portfolio analysis — gaps, bundles, health score
Post-Launch Optimizer	Monitors live listings, suggests improvements

Where To Access

Feature	Path
AI Listing Creator	/creator/listings/create/form
Commerce Dashboard	/creator/commerce
Bundles / Optimize / Catalog / Search	/creator/commerce (tabs)

Two Entry Paths

Decision Layer Path: Asset goes through full evaluation first, then commerce profile is built from scores.

Marketplace Direct: Skips evaluation — AI intake analyzes metadata directly. Faster, same result.

Both paths produce the same commerce profile. Everything downstream is identical.
